## Summary

Android Developer specializing in Kotlin and Jetpack Compose, with hands-on experience across MVVM architecture, REST APIs, Firebase, and real-time data systems. Experienced in managing the full app product life cycle, from design to deployment. Built and shipped 7+ Android apps including a production grade dual role ride-hailing platform with custom geolocation handling. Solved 200+ DSA problems on LeetCode.

## Education

**BML Munjal University** — B.Tech. in Computer Science and Engineering Sept 2022 – July 2026  
CGPA: 6.38

**Goenka Public School** — 12<sup>th</sup> CBSE | Aggregate: 86.7% March 2020 – April 2021

## Experience

**Android Developer Intern**, Areksoft Technologies Pvt. Ltd. — Hyderabad, India June 2024 – July 2024

- Built a demo OTP-based session authentication system using Volley for API integration, validating endpoints via Postman and parsing JSON responses to generate and verify session tokens.
- Developed a call log retrieval and cloud-backup module using Android's ContentProvider/Cursor APIs to fetch and categorize call records, and integrated the Google Drive API with a foreground service to automatically sync recordings in the background.

## Projects

**ChalRide — Ride Hailing App** | Kotlin, MVVM, Firestore, OSMDroid, Coroutines 2026

- Built a production-grade dual-role ride-hailing app (Rider + Driver) with a custom geohash grid engine querying Firestore driver locations using Haversine distance and a 5-minute freshness filter.
- Engineered a waterfall dispatch system targeting drivers one-by-one with atomic Firestore transactions to eliminate race conditions on simultaneous acceptance.
- Built OTP boarding with timer resume after process kill, 3-stage driver suspension system, and mid-trip crash recovery that routes drivers to their exact pre kill screen on relaunch.

**Crema — Coffee App** | Kotlin, Jetpack Compose, MVVM, Hilt, Firebase, Cloudinary Jun 2026 - Ongoing

- Designed and built a premium Starbucks-grade Jetpack Compose UI, including an auto-scrolling hero banner, animated category filters, and a shimmer loading system built entirely from Compose's animation APIs.
- Implemented live order tracking with a real-time Firestore listener syncing pickup status instantly, backed by a countdown-driven order lifecycle (30-min validity window) that auto expires stale orders.
- Built a GPS based store locator resolving the nearest pickup point across 35+ store locations by distance, using device location and real-time coordinate calculations.

**EventPro — Event Management App** | Java, XML, Firebase 2025

- Built a dual-role event management app with Firebase and Google (OAuth) authentication. Also designed a targeted invitation system enabling hosts to privately invite users by email with dedicated accept/decline actions, separate from the public event discovery feed.
- Built a real-time event feed using Firebase Realtime Database and RecyclerView, syncing event creation, updates, and deletions instantly across all users without manual refresh.

## Technologies

**Languages:** Kotlin, C++, XML (*Proficient*) | SQL (*Experienced*) | Java (*Familiar*)

**Android & Jetpack:** Android SDK, Jetpack Compose, MVVM, Kotlin Coroutines, Kotlin Flow, Room, Navigation Component, Navigation Compose, Foreground Services, ConstraintLayout, RecyclerView

**Libraries & Firebase:** Retrofit 2, OkHttp3, Hilt, Coil, Glide, Lottie, Shimmer, Firebase Auth, Firestore, Realtime Database, FCM, Google Play Services, OSMDroid, Cloudinary

**Tools & APIs:** Android Studio, Git, Postman, Figma, REST APIs, FusedLocationProvider, OpenRouteService, Nominatim, Google Drive API, Geohash
