Objective

Aspiring Android Developer with hands-on experience in coding and building Android applications in Kotlin and Java using MVVM architecture, REST APIs, and Firebase. Experienced in managing the full Android app product life cycle from design to deployment. Looking to join a team where I can build impactful products and keep growing as a developer.

Education

BML Munjal University — B.Tech. in Computer Science and Engineering Sept 2022 – Present
CGPA: 6.7/10

Goenka Public School — 12th CBSE | Aggregate: 86.7% March 2020 – April 2021

Experience

Android Developer Intern, Areksoft Technologies Pvt. Ltd. — Hyderabad, India June 2024 – July 2024

- Built a custom OTP API for secure session management in the Recordrr app using Retrofit and JSON parsing; implemented call recording uploads via Google Drive REST API.
- Developed a call log retrieval module using Android's ContentProvider API and cursor-based data access for real-time lead tracking.

Projects

WeatherApp | Kotlin, MVVM, Retrofit, Coroutines, Lottie 2026

- Real-time Android weather app using MVVM + LiveData; integrated Open-Meteo, Nominatim (reverse geocoding), and Open-Meteo Geocoding APIs via Retrofit with parallel Kotlin Coroutines calls.
- Auto-detects location via FusedLocationProvider; features Lottie animations, Shimmer skeleton loading, pull-to-refresh, and a 7-day/hourly RecyclerView forecast built with Material Design 3.

DrawingApp | Kotlin, XML, Canvas API, MediaStore 2025

- Feature-rich drawing app built with Android Canvas API; supports adjustable brush size, HSV color-picker wheel, background image picker, and undo/redo stack.
- Implemented save-to-gallery via MediaStore and background removal, delivering a complete creative tool experience on Android.

EventPro — Event Management App | Java, XML, Firebase 2025

- Campus event management app with dual-role support — hosts create/manage events and invite users by email; participants browse, join, and track events in real time via Firebase Realtime Database.
- Implemented Firebase Authentication (Email/Password + Google Sign-In via OAuth) and a RecyclerView-based event feed with CardView and Navigation Drawer for role-based UI flows.

Technologies

Languages: Kotlin, C++, XML (*Proficient*) | SQL (*Experienced*) | Java (*Familiar*)

Android & Jetpack: Android SDK, MVVM, ViewModel, LiveData, Kotlin Coroutines, Kotlin Flow, Room, ViewBinding, DataBinding, Navigation Component, ConstraintLayout, MotionLayout, RecyclerView

Libraries & Firebase: Retrofit 2, OkHttp, Lottie, Shimmer, SharedPreferences, Firebase Auth, Firestore, Realtime Database, FCM, Google Play Services

Tools & APIs: Android Studio, Git, Postman, Figma, UI/UX Prototyping, REST APIs, FusedLocationProvider, Google Drive API, Open-Meteo, Nominatim

Achievements

- Reached Zonal Level in Smart India Hackathon (SIH) 2023.
- Solved 300+ DSA problems through competitive coding on LeetCode and Coding Ninjas.
