Objective

Aspiring Android Developer with hands-on experience building Android applications in Kotlin and Java using MVVM architecture, REST APIs, and Firebase. Experienced managing the full app product life cycle from design to deployment. Looking to join a team where I can build impactful products and keep growing as a developer.

Education

BML Munjal University — B.Tech. in Computer Science and Engineering Sept 2022 – Present
CGPA: 6.7/10

Goenka Public School — 12th CBSE | Aggregate: 86.7% March 2020 – April 2021

Experience

Android Developer Intern, Areksoft Technologies Pvt. Ltd. — Hyderabad, India June 2024 – July 2024

- Built a custom OTP API for secure session management in the Recordrr app using Retrofit and JSON parsing; implemented call recording uploads via Google Drive REST API.
- Developed a call log retrieval module using Android's ContentProvider API and cursor-based data access for real-time lead tracking.

Projects

ChalRide — Ride-Hailing App | Kotlin, MVVM, Firestore, OSMDroid, Coroutines 2026

- Production-grade dual-role ride-hailing app (Rider + Driver); built a custom geohash grid engine querying Firestore driver locations with Haversine distance and freshness validation.
- Engineered a waterfall dispatch system targeting drivers one-by-one (15s windows) with atomic Firestore transactions to eliminate race conditions on simultaneous acceptance; two foreground services handle driver location with RTDB onDisconnect() crash detection and a START_STICKY rider service that survives process death.
- Built OTP boarding with timer-resume after process kill, 6-stage driver suspension system, and mid-trip crash recovery that routes drivers to their exact pre-kill screen on relaunch.

WeatherApp | Kotlin, MVVM, Retrofit, Coroutines, Lottie 2026

- Real-time weather app using MVVM + LiveData; integrated Open-Meteo, Nominatim, and Geocoding APIs via Retrofit with parallel Coroutines calls and FusedLocationProvider auto-detection.
- Features Lottie animations, Shimmer skeleton loading, pull-to-refresh, and a 7-day/hourly RecyclerView forecast with Material Design 3.

EventPro — Event Management App | Java, XML, Firebase 2025

- Dual-role campus event app — hosts create/manage events and invite users by email; participants browse, join, and track events in real time via Firebase Realtime Database.
- Implemented Firebase Authentication (Email/Password + Google Sign-In via OAuth) with a RecyclerView event feed, CardView, and Navigation Drawer for role-based UI flows.

Technologies

Languages: Kotlin, C++, XML (*Proficient*) | SQL (*Experienced*) | Java (*Familiar*)

Android & Jetpack: Android SDK, MVVM, ViewModel, LiveData, Kotlin Coroutines, Kotlin Flow, Room, ViewBinding, DataBinding, Navigation Component, Foreground Services, ConstraintLayout, RecyclerView

Libraries & Firebase: Retrofit 2, OkHttp3, Glide, Lottie, Shimmer, Firebase Auth, Firestore, Realtime Database, FCM, Google Play Services, OSMDroid, Cloudinary

Tools & APIs: Android Studio, Git, Postman, Figma, REST APIs, FusedLocationProvider, OpenRouteService, Nominatim, Google Drive API, Geohash

Achievements

- Reached Zonal Level in Smart India Hackathon (SIH) 2023.
- Solved 300+ DSA problems through competitive coding on LeetCode and Coding Ninjas.
